WORK EXPERIENCE

Bet365

Denver, CO

Jr. Data Scientist

Sept 2025 – Present

Baseball Analytics Data Platform Project:

- Designed and built a scalable baseball analytics warehouse in GCP BigQuery using Medallion Architecture (Bronze/Silver/Gold) to transform raw Sportsradar API feeds into production-ready datasets.

Baseball Managerial Decision Engines (Monte Carlo Simulation):

- Designed and deployed machine learning decision engines for a baseball Monte Carlo simulation using data from the Baseball Analytics Platform. Built end-to-end pipelines from data extraction through model training, export, and simulation integration. Model and feature selection optimized using PR-AUC scores.

Lawfty

San Francisco, CA (Remote)

Data Engineer Intern

Oct 2024 – Dec 2024

- Built and maintained scalable data pipelines using PostgreSQL and Python to transform raw inputs into ML-ready datasets optimized for tree-based models.
- Designed efficient database schemas to streamline storage and enhance integration with downstream machine learning workflows.

Truck X

San Francisco, CA (Remote)

Data Scientist Intern

Oct 2023 – Jun 2024

- Engineered data-driven solutions to improve fleet safety and operational efficiency across two key initiatives.
- Developed a high-accuracy model to detect sharp-turn events from real driving data and built a rule-based clustering system for geofence recommendations tailored to fleet size and business needs. Streamlined collaboration and deployment by establishing Git-based workflows and reproducible ML pipelines.

EDUCATION

University of San Francisco

San Francisco, CA

M.S. in Data Science – Concentration in Data Engineering

Jul 2023 – Jun 2025

Student Athlete, Baseball, Starting Pitcher

University of San Francisco

San Francisco, CA

B.S. in Mathematics

Aug 2021 – May 2023

Student Athlete, Baseball, Relief Pitcher

PROJECTS

- Petri Dish Nucleus Model (USF)** – Integrated computer vision with a custom U-Net in PyTorch to segment and count cell nuclei in petri dish images. Achieved **85.9% Dice score** and **82.4% pixel accuracy** using binary cross-entropy loss, dropout regularization, and OpenCV for post-processing.
- MLB Pitcher Strikeout Projection (Personal)** – Built regression and classification models on pitcher game logs scraped via Selenium. Clustered pitchers to improve performance, tracked experiments with MLflow, and deployed the model using FastAPI and Streamlit.

ACCOMPLISHMENTS

All-West Coast Conference Honorable Mention

Spring 2025

SKILLS

Python – Scikit-Learn, PySpark, SparkML, PyTorch, FastAPI

GoLang

SQL – Big Query, Postgres, pgAdmin

Tools – GitHub, MLflow, Airflow, Steamlit

Cloud Based Computing – GCP, AWS
